Laser Jackets

Studded with 22 red diode lasers and controllable from any lighting control panel via wireless DMX, these jackets generate impressive visual effects and constitute an enrichment of any stage setting or dancing performance.

The unconstrained freedom of movement they allow provides performers with unlimited choreographic liberty. An integral, rechargeable LiPo battery 1600mA powers their diode lasers for up to 60 minutes. Each jacket is equipped with a Wireless Solution Micro R-512 Lite G4 Receiver.

These jackets have been featured at performances by the "Circus FlicFlac" and the "URBANATIX" street-artist show and added unforgettable accents to the scene during vehicle presentations at Volkswagen's Group Night in Geneva.

Their extremely easy handling and employment of Class I diode lasers allow their rental as stand-alone units requiring no supervisory personnel or on-site services from us.
